

Transboundary Water Conflict Resolution: The Israeli-Arab Case

(DevP 246)

Taught by Visiting Professor Itay Fishhendler
(Hebrew University of Jerusalem)

Mondays and Wednesdays
10-1130 am
311 Wellman Hall
CCN 18626 (3 Units)

Much of the Earth's surface is made up of transboundary basins. The shared nature of these water bodies has been a source of water conflicts in many places while fostering cooperation in others. The aim of the course is to demonstrate the effectiveness, efficiency and political feasibility of a wide-range of technological, legal, and institutional mechanisms to resolve transboundary water conflicts. In particular, the course will focus on the water conflicts between Israel and its Arab neighbors. Students will encounter approaches for addressing water conflicts while accommodating climate and political uncertainty.

This is a Master of Development Practice course. With professor's consent, advanced undergraduates (juniors and seniors) can also take the course.

This course is approved as an elective for the Society & Environment major, College of Natural Resources
This course can be an elective for the for International and Area Study majors with advisor's approval
