

WIRELESS ACCESS ON CAMPUS

eduroam is the recommended wireless network for enrolled students. It is the most secure option and gives you complete access to campus resources and databases.

Berkeley-Visitor is an open wireless network for campus guests. It does not grant access to restricted campus resources/databases. Email clients (like Outlook or Apple Mail) won't work.

To connect to **eduroam**, you need to set your **eduroam key** (password) first:

1. Visit <https://wifi-keys.berkeley.edu/> and log in with your CalNet username & passphrase.
2. Click on **Create New**. A randomized key will be generated and displayed – this will be your **eduroam key**.
3. Click **Create Account** to set/confirm your key. Make sure to **save/note your password**, as **you cannot view it again** later!

After setting your key, connect to eduroam on your devices using your **Berkeley email** ([CalNet ID]@berkeley.edu) as your username & your **eduroam key** as your password.

If you have lost/forgotten your eduroam key, use the **Manage Account** link on <https://wifi-keys.berkeley.edu/> to generate a new passcode. Make sure to save/note it this time!
