

6.0 Required Services

e. Staging Site (S-site)

- i. A Staging site is a location where aliens are enrolled into the ATD Program on GPS monitoring and then required to report to another ERO location in the United States for further evaluation.
- ii. Staging sites are located, but not limited to, various locations along the United States borders.
- iii. Staging sites may be staffed by at least one contractor performing a partial enrollment, installing GPS technology, and assigning alert management services. (see SOW Section 6.1.f.ii.)
- iv. When the S-site participant arrives in their claimed final destination city, the contractor will immediately take the following steps:
 1. Contact the participant in any manner possible (e.g., obtained cell phone number, obtained points-of-contact, push messaging).
 2. Upon contact, determine if participant has appropriate equipment for transition to the biometric technology monitoring services application.
 - a. If yes, arrange for participant to report to the contractor to remove the GPS unit, retrieve associated equipment, and install the biometric technology monitoring services application on the participant's phone with enrollment.
 - b. If no, inform participant that they are to report to the contractor as soon as possible to be assigned a mobile device with the installed biometric technology monitoring services application. The contractor will inform the participant that the mobile device is not a cell phone and has no internet capabilities, etc. Once the participant obtains their own smartphone, the contractor will retrieve the provided mobile device.
 3. Provide a weekly S-site Report (see 6.10 Notifications and Reports, 15. Weekly Program Reports) with the following:
 - a. Number of S-site automatic GPS de-escalations
 - b. Number of transitions to a biometric technology monitoring services application
 - c. Number of contractor mobile devices issued with the installed biometric technology monitoring services application
