 - Recognizing the Signs of Human Trafficking
 - Questions and Answers (regarding human trafficking and human smuggling)
- Family Therapy (not-to-exceed 1.5 hours per session)
 - Development of Treatment Plan
 - Therapeutic interventions provided to the participant and their family members consistent with the participant's treatment plan
- Individual Rehabilitation (not-to-exceed 1.5 hours per session)
 - Development of Treatment Plan
 - Assistance with maintaining or restoring the participant's daily living skills, medication compliance, as well as leisure and community activities in accordance with the participant's treatment plan
- Supplemental Services Evaluation (not-to-exceed 2 hours per session)
 - Mental health screening
 - Development of Treatment Plan
 - Assistance with accessing medical, educational, social, prevocational, vocational, rehabilitative, or other community services in accordance with the participant's treatment plan

The participating non-profit organization(s) shall:

- Have office locations within 50 miles of the C-site location. Local NGO partners shall maintain staffing capacity to provide services in-person or virtually, as required, following CDC guidelines in each city/state. While virtual services should be available for use at any distance, face-to-face services should be the assumption and virtual services provided when face-to-face is not reasonable or appropriate.
- Meet all federal, state, and local licensing requirements.
- Provide bilingual therapists and clinicians or utilize language translation services as necessary.
- Parenting Education Sessions:
 - After the introduction orientation, parents will be provided with seven (7) one-hour or 60-minute educational sessions. Our work in this area shows that migrant parents struggle with raising their children in a culture so fundamentally different from what they're used to. Our parenting education programs aim to bridge this cultural gap, giving migrant parents practical skills to take care of their children effectively and positively. Our programs will also help parents process their own stress and trauma in ways that do not impact their children. Endeavors will be using parent education groups that incorporate concepts from the Triple P – Positive Parenting Program, an evidenced-based curriculum that helps parents manage their children's behavior and build strong, healthy relationships. The first session will be a parent diagnostic to determine which classes would be most appropriate based on the family make-up, age-appropriate programming for children, and gaps the parent may self-identify. From their a tailored parenting education plan is drafted, for up to six (6) more sessions.
 - Class topics may include sessions from the following Endeavors previously used resources:
 - **ACT-Raising Safe Kids (ACT-RSK) program**
focuses on educating parents and caregivers to create early environments to protect children from violence and maltreatment.
 - **The Circle of Security**
Increases parent-child interactions and parental awareness to enhance attachment security between parents and children.
 - **The Incredible Years**
Describes a research-based program for reducing children's aggression and behavior problems and increasing social competence at home and at school.
 - **The Nurturing Parenting Programs**
Outlines a family-based program that involves both parents and children in activities, focusing on building a positive regard for self and others.
 - **Parents as Teachers**
Parents as Teachers is an international early childhood parent education and family support program designed to enhance child development and school achievement through parent education accessible to all families.
 - This area of new programming will have five (5) goals that will complement the current case management activities of GEO/BI. These goals are:
 - (1) promote the independence and health of migrant families;
 - (2) promote the development of non-violent, protective environments for children;
 - (3) promote the appropriate educational development of children through enhanced parenting skills;
 - (4) reduce the incidence of child abuse, mental illness, behavioral problems, delinquency and homelessness in migrant families; and

(5) enhance the competence, resourcefulness and self-sufficiency of parents in raising their children.

- 90 Minute Child Abuse Prevention Orientation
 - Endeavors Parenting Navigators will provide an initial orientation that provides migrant parents with a detailed guidance to understand child development, to respond appropriately to their child's needs, and to cope with the challenges of parenting. This first orientation will provide caregivers with knowledge, resources, and support to develop parenting skills to enhance child and family well-being. This introductory session can also help parents or caregivers learn the tools and strategies to provide a positive and nurturing home environment where their children will thrive physically, emotionally, and cognitively.
 - Dependent on public health protocols – may be in person or virtual.
